What is New Age Blast Media?

- * Manufactured from 100% Recycled Bottle Glass.
- * The use of post-consumer glass directly benefits the environment by reducing landfill waste.
- * The manufacturing process reduces the glass and strips the contaminants and waste by-products from the glass.
- * The product is then sized and screened to the exact specifications needed for various Abrasive Blasting needs.
- * Bottle or Tri-Mix Glass is chemically known as "Amorphous Silica". It has virtually no crystalline-silica which is commonly found in sand. Crystalline Silica is the leading cause of Silicosis.
- * Extra course to ultra fine grit sizes!
